

TEXAS INSTRUMENTS

Experience

Anushka Yadav

BTECH Computer Engineering

2022-2026

Eligibility Criteria

CGPA : 6.00 +

Branches : CS/IT

Stipend

INR : ₹ 60000 per Month

PPO will be offered on performance basis

Roles

- Software Development Engineer
- Data Engineer

Location

Bangalore

Do Note their Head Office is in Bangalore

Online Assessment - 6th August, 2024

The duration of online assessment was about 90 mins. The login window was 30 mins. The topics covered during the assessment were aptitude, CS fundamentals and two DSA coding questions. First one was the two pointer problem and the second one was based on the basic for loop. The DSA questions were pretty easy and so were the rest of the mcq questions (Only single correct answer)

As far as I remember there was no negative marking. We were asked to give the online assessment in college since it was offline due to which we needed to keep our laptops charged. I faced multiple issues before giving the tests. Most of those were related to system compatibility. So ensure your system is compatible before giving the test. They also provide a link to HirePro where you can check the compatibility of your system.

The results were announced on 7th of August, 2024 at around 3pm. I was very excited and at the same time nervous since I was shortlisted for the first time for any company's interview round. I already had my CS fundamentals revised because of interviews of previous companies for which I never got selected and also had my DSA basics revised. I also planned to review my resume once and solve the top 20 puzzles on geeks for geeks.

Interview Round - 8th August, 2024 (Technical)

On 8th August, 2024 I was very nervous because it was my first interview for a company. The interview was scheduled online.

There were two panels of interviewers. I had been assigned Panel 2. After a long wait, my interview began at 12 noon. There were two interviewers. Both of them introduced themselves and then I was asked to give my introduction. One of the interviewers was very friendly and asked me to be stress free. The other one was from their ML team and began asking me questions on my resume. He even asked me to open my github repo of one of the projects in my resume which I had also mentioned during my introduction. I explained to him the important parts of the code which I could remember. Then he began asking me basic ML questions. Unfortunately, I had not revised those for a long time so I could only remember the answers in bits and pieces. I could see that he was partially satisfied with my answers.

The other interviewer asked me basic coding questions and asked me to code and execute them on any editor. I chose VScode initially but later had to switch to the online compiler due to some

issue with my editor. The first question that he asked me was how to calculate the length of a given string without using any predefined function of the string. It was an easy one I thought. But as I began implementing the logic I had no idea how to proceed. I thought for about 2-3 mins then came up with the solution. The solution was that I initialized a counter to 0 and a pointer to the first index of the string character. Till the character was not null I incremented the pointer as well as the counter. As the character became null, the while loop condition broke and the length of the string was printed on the terminal. He then asked variations of the same question and seemed to be satisfied with my answers. One important thing to note is that always think out loud while coding the given problem. Even if you are not able to solve the problem it's alright but brainstorm verbally so that the interviewer can help you out in case of any difficulty. Also do not hesitate to take hints from the interviewers.

The same interviewer then asked me basic CS fundamentals like what is a constructor and a destructor? what is constructor overloading? and does destructor overloading occur? I answered each of these questions with full explanation and he was satisfied with the answers

The other interviewer began asking me basic SQL queries and their variations which I answered rather easily. My interview lasted for about an hour and in the end they asked if I had any questions for them. I asked 3 questions : How is a typical day in the life of a software engineer at Texas Instruments?. The second one was what is the career path of a software engineer at Texas Instruments and lastly I asked what were my areas of improvement during the interview? They answered all of my queries and I was satisfied. They wished me all the best for the results.

I was satisfied with my interview but also nervous since I didn't do well during the resume part of the interview. The results were announced in the evening at around 6pm and I was very happy to be one of the selected candidates.

Important Points

1. Review your resume well and revise your tech stack and projects in detail
2. Be clear in CS fundamentals : OOPS, DBMS, Operating Systems and DSA
3. Practice the A2Z sheet / SDE sheet of striver for DSA coding questions
4. Attend the PPT of the company. Questions may be asked based on the company and the role for which you are applying
5. Request your seniors to take regular mockups so that they can point out your mistakes and suggest improvements. This helped me a lot
6. Be confident and positive during your interview. Stress can lead you to make many silly errors

Resources

1. For CS fundamentals I followed interviewBit top 50-100 questions
2. <https://takeuforward.org/strivers-a2z-dsa-course/strivers-a2z-dsa-course-sheet-2>

Above is the link for the a2z striver sheet

3. For questions related to tech stack also I followed interviewBit top 50-60 questions
4. I watched Striver's playlist for all DSA topics and specifically for topics like Dynamic Programming, Recursion, Graphs, Trees, Bit Manipulation, Sliding Window and Two Pointers etc.
